**Control of Complex and Uncertain Systems: New Types of Feedback (Communications and Control Engineering)** Stanislav V. Emelyanov, Sergey K. Korovin

This book describes the evolution of feedback theory, from its simplest form to more complex guises, and connects this to the control of complex systems. It systematically develops a new approach to the synthesis of non-linear feedback controllers under uncertainty. This book aims to increase the understanding of potential reactions of such systems to uncertain forces and unknown factors contained in feedback mechanisms. The theoretical basis for a new generation of perfect automatic systems is introduced.
