For more than ten years, the "Science for Conservators" series have been the key basic texts for conservators throughout the world. Scientific concepts are basic to the conservation of artefacts of every type, yet many conservators have little or no scientific training. These introductory volumes provide non-scientists with the essential theoretical background to their work. The prime reason for the books' continuing success is that they clarify often complex ideas, without distortion or over-simplification. They are useful basic textbooks for all conservators in training, and as such are in use throughout the world. Now part of the "Heritage: Care-Preservation-Management" handbook programme, these volumes in the collection have now been provided with carefully selected bibliographies and reading lists, to bring the student into contact with the most recent work in the field. Further volumes are in preparation.
