A Course in Topological Combinatorics (Universitext) Mark de Longueville

A Course in Topological Combinatorics is the first undergraduate textbook on the field of topological combinatorics, a subject that has become an active and innovative research area in mathematics over the last thirty years with growing applications in math, computer science, and other applied areas. Topological combinatorics is concerned with solutions to combinatorial problems by applying topological tools. In most cases these solutions are very elegant and the connection between combinatorics and topology often arises as an unexpected surprise.

The textbook covers topics such as fair division, graph coloring problems, evasiveness of graph properties, and embedding problems from discrete geometry. The text contains a large number of figures that support the understanding of concepts and proofs. In many cases several alternative proofs for the same result are given, and each chapter ends with a series of exercises. The extensive appendix makes the book completely self-contained.

The textbook is well suited for advanced undergraduate or beginning graduate mathematics students. Previous knowledge in topology or graph theory is helpful but not necessary. The text may be used as a basis for a one- or two-semester course as well as a supplementary text for a topology or combinatorics class.

From reader reviews:

Angela Powers:

The particular book A Course in Topological Combinatorics (Universitext) will bring you to the new experience of reading a book. The author style to elucidate the idea is very unique. In the event you try to find new book to study, this book very suited to you. The book A Course in Topological Combinatorics (Universitext) is much recommended to you to learn. You can also get the e-book through the official web site, so you can more readily to read the book.

Donald Campbell:

Is it anyone who having spare time after that spend it whole day simply by watching television programs or just resting on the bed? Do you need something new? This A Course in Topological Combinatorics (Universitext) can be the reply, oh how comes? A book you know. You are so out of date, spending your extra time by reading in this brand-new era is common not a nerd activity. So what these books have than the others?

Dorothy Frazier:

As we know that book is very important thing to add our information for everything. By a guide we can know everything we really wish for. A book is a list of written, printed, illustrated or perhaps blank sheet. Every year was exactly added. This reserve A Course in Topological Combinatorics (Universitext) was filled about science. Spend your extra time to add your knowledge about your scientific disciplines competence. Some people has diverse feel when they reading any book. If you know how big good thing about a book, you can really feel enjoy to read a reserve. In the modern era like today, many ways to get book that you simply wanted.

Nichol Colby:

What is your hobby? Have you heard in which question when you got scholars? We believe that that problem was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And also you know that little person such as reading or as studying become their hobby. You need to know that reading is very important and also book as to be the issue. Book is important thing to incorporate you knowledge, except your personal teacher or lecturer. You will find good news or update concerning something by book. Numerous books that can you take to be your object. One of them is this A Course in Topological Combinatorics (Universitext).
