Any information technology organization must have a highly structured framework into which it can place processes, principles, and guidelines. The framework used for software development is called a lifecycle. The software development lifecycle (SDLC) defines a repeatable process for building information system that incorporate guidelines, methodologies, and standards.

A lifecycle delivers value to an organization by addressing specific business needs within the software application development environment. The implementation of a lifecycle aids project managers in minimizing system development risks, eliminating redundancy, and increasing efficiencies. It also encourages reuse, redesign, and, more importantly, reducing costs.
