### BIOLOGY IS THE STUDY OF LIFE

Life is everywhere, thriving in the city and in the country, teeming in ecosystems around the planet—in deserts, oceans, and even the Arctic. And life is right outside your door! *Backyard Biology* invites children ages 9 and up to investigate living things—especially in yards, parks, nature areas, and playgrounds. Trivia and fun facts bring animals, plants, and microorganisms to life, in all their wonder.

Readers become Nature Detectives with activities and projects that encourage children to make discoveries. Children will construct a plankton net to collect pond samples, and they'll grow microorganisms in a Winogradsky Column. They'll discover what mystery plants sprout from collected soil samples and build a rolypoly habitat. When children experiment with phototropism and geotropism, they'll discover the ways plants move. In *Backyard Biology*, children will scout out different habitats to observe and investigate—and do their part to protect them.

This great information can easily drawn you into new stage of crucial considering.

#### **Bernard Taylor:**

As a student exactly feel bored to help reading. If their teacher inquired them to go to the library as well as to make summary for some e-book, they are complained. Just very little students that has reading's soul or real their hobby. They just do what the instructor want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that studying is not important, boring as well as can't see colorful images on there. Yeah, it is to become complicated. Book is very important in your case. As we know that on this era, many ways to get whatever we would like. Likewise word says, ways to reach Chinese's country. So , this Backyard BIOLOGY: Investigate Habitats Outside Your Door with 25 Projects

(Build It Yourself) can make you sense more interested to read.
