From Associations to Rules: Connectionist Models of Behavior and Cognition: Proceedings of the Tenth Neural Computation and Psychology Workshop (Progress in Neural Processing)

This book introduces a host of connectionist models of cognition and behavior. The major areas covered are high-level cognition, language, categorization and visual perception, and sensory and attentional processing. All of the articles cover unpublished research work. The key contribution of this book is that it focuses exclusively on the advances in connectionist modeling in psychology. The papers are relatively short, and were explicitly written to be accessible to both connectionist modelers and experimental psychologists.
